

Midterm -- Itec/MOD 2635

<https://eclass.yorku.ca/mod/assign/view.php?id=1944720>

Due at midnight Wednesday 23, 2022

Please submit a short report (PDF or WORD) with some brief explanation and **URL links** to your results

Responsive Image Gallery with Flexbox, Security and Sway (WORD)

Contents

Midterm -- Itec/MOD 2635	1
Responsive Image Gallery with Flexbox, Security and Sway (WORD)	1
Question 1: Web security [10 pts]	1
Question 2: WORD table to contents (SWAY interactive web) [20 pts]	1
Question 3: Flexbox Gallery [60 pts]	2
➤ https://willalec.trinket.io/sites/2635-gallery-midterm	3

Question 1: Web security [10 pts]

Protect your URL at: <http://oldtown.glendon.yorku.ca/~lastname/2023/2635/midterm/>

with username “**your last name**” and password “**your student number**”.

Your **.htpasswd database** must be stored at:

</home/lastname/midterm/2635/.safe/>

Question 2: WORD table to contents (SWAY interactive web) [20 pts]

- Starting with the WORD FILE [here](#); Add automatic Table of Contents; Save as a PDF (with links).
- Your final PDF file to be displayed at:
<http://oldtown.glendon.yorku.ca/~lastname/2023/2635/midterm/toc02.pdf>
- Your **SWAY** (iframe) should be displayed here:
<http://oldtown.glendon.yorku.ca/~lastname/2023/2635/midterm/sway>

Your PDF file should look and behave as close as possible to [this PDF file](#).

Question 3: Flexbox Gallery [60 pts] is a CSS layout module that makes the creation of fully flexible user interfaces possible.

- Create a responsive image gallery at every viewport size.

It's a simple **div** that includes a couple of **img** tags. The images are randomly generated from the Unsplash Source API. I give you this code below. The **.container** class is the flex container, while the **.item** class hold the flex items (direct children).

```
<link rel="stylesheet" href="style.css">

<body>

<div class="header">

  <h1>Our Gallery</h1>

  <ul class="nav">

    <li><a href="#">Home</a></li>

    <li><a href="#">About</a></li>

    <li><a href="#">Contact</a></li>

  </ul>

</div>

<div class="gallery">

  

  

  

  

  

  

</div>

</body>
```

Your **starting html** code <https://trinket.io/html/68df47e048> (no CSS).

- The html code has stacked the images next to each other nicely, retaining their original 320×240 px size. But it is not responsive. Now the student will write the **style.css** to make your URL responsive at:

<http://oldtown.glendon.yorku.ca/~lastname/2023/2635/midterm/gallery-flex.html>.

Your web site will look and behave exactly like this:

- <https://willalec.trinket.io/sites/2635-gallery-midterm>

THE END
